

- a) What are business to consumer (B2C) and business to business (B2B) Web applications, and what are some examples of each type? List out some of the business drivers for today's information system. 3
- b) You are a new systems analyst and eager to prove your abilities on your first project. You are at a problem analysis meeting with the system owners and users and find yourself saying, "we need to do this to solve the problem," into what common trap are you in danger of falling? What technique could you use to avoid the trap? *solutioning trap* 3
- c) Why do many new systems analysts fail to effectively analyze problems? What can they do to become more effective? *planning analysis design implementation* 2
- d) Briefly describe the four steps in a system development process. Discuss what happens in each step? 4
- e) Assume you are a systems analyst who will be conducting a requirements analysis for an individually owned brick-and-mortar retail store with a point-of-sale system. Identify who the typical internal and external users might include? *store cashier, inventory manager, etc.* 2

2. a) As a new project manager in a rapidly growing organization, you have been asked to lead a project team for an important project. The scope of the project is not too broad, project time frames are somewhat on the tight side but definitely doable, and the budget is more than generous. In fact, you have been given the authority to hire as many people as you want for your project team. You estimate that 5 people would be about right for this type of project, 8 would provide a healthy amount of backup, and 10 could give you the resources to deliver an outstanding system in record time. What is something you might want to keep in mind before making your decision on how many people to hire? 2
- b) What is the trigger for communicating the project plan, and who is the audience? Why is communicating the project plan important? 2
- c) Show the business factors that are driving system analysis. Based on these factors, what should system analysis address? 2
- d) Briefly describe about the eight major activities in the project management life cycle. 5
- e) Which responsibility project managers do to manage changes that occur and/or are requested during a project? List out the factors to consider in estimating task durations. 3

1. ☒ Suppose your company has a contract with a XYZ local firm to link all of their system so they can transparently work together. Their applications include a number of existing legacy systems, which were built at different times by different developers using a variety of languages and platforms, as well as several newer contemporary applications. What is the **term** for this type of linking? What type of tool would you most likely use, and shows some examples of these tools?

ESB— Apache, camel, mule ESB
API- NEXT API, soap
integration platforms— Dell boomi, zapier

☒ What are the four steps in a system development process? Discuss what happens in each step.

☒ Write down the most important technology drivers for today's information systems. **IM AB CC**

☒ Differentiated between the role of system analysis and the role of the rest of the stakeholders.

☒ How do communication and collaboration systems improve efficiency and effectiveness? What are some of the communication and collaboration system that are being used by an increasing number of organizations? **FESF K**

Email system
instant messaging tool
video conference tool
project management tool
schedule management tool

2. ☒ Suppose you are the project manager of a medium-size project that is scheduled to take 10 months from project Initiation on September 1st through delivery on June 30th. It is now April 1st, seven months since the project began, and the project is slightly behind schedule, by perhaps a week. Draw a Gantt chart. Assume you are using the FAST methodology, and that project phases can overlap.

☒ Briefly describe about the eight major activities In the project management life cycle. **STTT RT PP**

☒ Why is critical path analysis important for project management?

☒ Show the popular tool used to Identify tasks In the project management life cycle. **Work Breakdown Structure (WBS)**

☒ Suppose you assigned a project manager for a XYZ project. During one phase of the project, you review the project schedule and realize that a member of your project team has been assigned multiple tasks that add up to more hours than the person has available to work during that period. What technique could you use to resolve this? **Resource Leveling**

Answer any 5 of the following questions

- cl. a) How do communication and collaboration systems improve efficiency and effectiveness? What are some of the communication and collaboration system that are being used by an increasing number of organizations? 3
- b) You are a new systems analyst and eager to prove your abilities on your first project. You are at a problem analysis meeting with the system owners and users and find yourself saying, "we need to do this to solve the problem," into what common trap are you in danger of falling? What technique could you use to avoid the trap? 3
- c) What kind of knowledge and skills should a system analyst possess? 2
- d) Briefly describe the four steps in a system development process. Discuss what happens in each step? 4
- e) Assume you are a systems analyst who will be conducting a requirements analysis for an individually owned brick-and-mortar retail store with a point-of-sale system. Identify who the typical internal and external users might include? 2
